

B1
Cont and the at least one web server running on the same host, thereby notifying the at least one web server that the master source file set has changed; and

(d) receiving a response from the at least one web server indicating that the destination file system installed the identified changes.

B2 4. (Twice Amended) The method of claim 1 wherein the identifying step comprises the steps of:
inspecting a current version of the master source file set; and
comparing the current version to a previous version of the master source file set on the master computer.

B3 19. (Twice Amended) A web service system, comprising:
a manager for managing the web service system;
a host comprising a web server for receiving web page requests and an agent in communication with the manager and the web server; and
a content distributor in communication with the host and the manager, the content distributor providing notification of changes to a master source file set on a master computer to the host and for receiving a response indicating that the identified changes are installed.

B4 21. (Twice Amended) The system of claim 19, wherein the content distributor comprises:
(a) an identification module for identifying changes in the master source file set on a master computer;
(b) a modification list for storing identified changes to the master source file set;
(c) a transmitter for transmitting the modification list to the agent, the agent having access to a destination file system; and
(d) a receiver for receiving a response indicating that the destination file system received the identified changes.

B5 24. (Twice Amended) A content distributor in communication with a computer, comprising:
(a) an identification module for identifying changes in a master source file set on a master computer;
(b) a modification list for storing identified changes to the master source file set;
